symbolic resources affect social cultural and economic development the value of being made in america or made in italy for example depends not only on the material advantages each place offers but also on the symbolic resources embedded in those places of production drawing on case studies that range from the vineyards of south africa and the textiles of thailand to the mundo maya in latin america and tourist destinations in tuscany this volume examines the various forms that cultural wealth takes

the processes involved in its construction and the ways it is deployed leading scholars from a range of disciplinary backgrounds examine how symbolic resources and cultural understandings help firms and regions develop through a thoughtful analysis of current day cases as well as historical developments the cultural wealth of nations offers an exciting new alternative to standard economic explanations about the wealth and poverty of nations

deductive irrationality examines and critiques economic rationalism from the perspective of political philosophy the essays in this collection analyze not only the work of founders of the discipline of economics but also political philosophers influential in this founding and select contributors of seminal theories in modern economic thought namely thomas hobbes john locke adam smith alfred marshall john maynard keynes friedrich hayek gunnar myrdal robert e lucas jr and john f muth the main theme linking all of the essays together is that economics is a product of modern rationalism and shares with that rationalism the belief that the only real knowledge is scientific knowledge derived from a scientific method modeled on mathematics this method gives both modern political science and modern economics their abstract character adam smith s contribution to western thought was more than mere economics his innovations and his variance from previous thinkers follows machiavelli in finding human nature in the realistic conception of examining men as how they are rather than the classical view that we should look to the idea of man s formal excellence to smith humanity emerges from a desire for self preservation where every worker competes to exchange the fruits of their labor with that of others the result is a gap between the world of common sense and the world of theory that practitioners in both fields no longer truly understand by adopting the perspective of political philosophy the contributors take an approach that is alien to most economists and in doing so address many of the currents and tensions that underlie modern economic theory and by implication the rational choice theory in political science
